WHAT WE DO (USA AND OVERSEAS)

EXISTING companies and facilities:

- Evaluate organizational effectiveness
- Perform business health-check-ups
- Optimize process work-flows
- Develop performance improvement programs
- Manage facility operations and maintenance
- Manage and oversee production assets

NEW companies and facilities:

- Design effective organizations
- Develop and engage the work force
- Strengthen and negotiate contracts
- Manage large projects through the construction period
- Develop facility operations and maintenance programs
- Provide technical due diligence for acquisitions

CASE STUDY OF RECENT WORK

Productive Outcomes LLC ("PO Advisory") is nearing completion of a project management contract providing Owner's oversight for construction of a new combined cycle power plant in Jamaica. Our company stepped into the team-leader role approximately mid-way through the construction period. Responsibilities include:

- Oversee and guide progress of the general contractor
- Interface with the major OEM to resolve technology issues
- Monitor and assist in transition to the operating company
- Oversee and confirm results of the final acceptance tests
- Interact with project company off-taker, insurer, lender, and legal advisers
- Manage construction claims in dispute

This project was guided into commercial operation on December 17, 2019. Final commissioning of plant add-on systems (including back-up fuel) is underway. The project was recently nominated for project of the year in Jamaica.

WHO WE SERVE

- Manufacturers
- General Contractors
- Regulated Utilities
- Independent Power Producers
- Government Agencies
- Financial Investors and Lenders
